"CSE (Cybersecurity) student at NFSU focused on the intersection of AI and security."

Profile

Third-year B.Tech-M.Tech (Cybersecurity) student at NFSU specializing in the intersection of AI, automated security, and digital forensics. Experienced in architecting robust solutions ranging from serverless cloud compliance frameworks to LLM-driven intelligence tools and forensic analysis systems. Passionate problem-solver, Linux enthusiast, and active community leader as Co-Founder of the NFSU AI/ML Club.

- **Cybersecurity & Forensics:** Cloud security automation, anti-forensics detection, and applied cryptography.
- **AI & Engineering:** Retrieval-Augmented Generation (RAG), local LLM deployments, and full-stack system architecture.

Education

2023–2028 **Integrated B.Tech + M.Tech in Computer Science and Engineering (Cybersecurity)**, *National Forensic Sciences University*, Gandhinagar, Gujarat

- Current Semester: 6
- Cumulative Performance Index (CPI): 8.95 / 10.0
- Semester-wise SPI: 8.20, 9.05, 8.30, 8.95, 8.95

Technical Skills

Languages	Python, C/C++, Rust, Bash, JavaScript, HTML/CSS
AI / Data Science	LangChain, FAISS, Ollama, RAG, PyTorch, Scikit-learn, Pandas, NumPy, Matplotlib, OpenCV, LLM APIs
Cloud & Web	AWS (Lambda, EventBridge, SAM), Boto3, FastAPI, React, WebSockets
Dev & Databases	Linux (Debian, Kali), Git, Docker, SQL Server, Entity Framework Core, Tauri
Domains	Cybersecurity, Machine Learning, Cloud Security, Digital Forensics, Systems Programming

Projects

2026 **ChronoTrace - NTFS Anti-Forensics Detection Framework**, *GitHub: `GR4Y-SCALE/ChronoTrace`*

- Engineered an advanced forensic analysis tool for detecting timestamp manipulations and log evasion via post-mortem image analysis and real-time live monitoring.
- Implemented custom deterministic anti-forensics rules evaluating $MFT, USN Journal, and $LogFile NTFS structures.
- **Tech Stack:** Python, FastAPI, React 19, WebSockets, libewf

2026 **RBIH IITD Tryst Hackathon**, *GitHub: `ADPer0705/RBIH-IITD-Tryst-Hackathon`*

- Developed Comprehensive Exploratory Data Analysis (EDA) Jupyter Notebooks and Reports for the National Fraud Prevention Challenge.
- Built and analyzed datasets focusing on digital transaction security and fraud-detection using statistical modelling techniques.
- **Tech Stack:** Python, Jupyter Notebook, Pandas, Matplotlib, HTML, Data Analysis

2026 **MerkleWatch - Cryptographic Integrity Tool**, *GitHub: `ADPer0705/MerkleWatch`*

- Developed a CLI-first utility for creating deterministic, tamper-evident directory snapshots using Merkle trees and SHA-256 hashing.
- Implemented domain separation and chunked reading (64KB) for memory-efficient processing of large files, along with customizable ignore rules.
- **Tech Stack:** Python, Cryptography (SHA-256), File System Operations

2026 **Sempropos - Semantic CLI Command Proposer**, *GitHub: `ADPer0705/sempropos`*

- Built an open-source, offline-first Linux CLI that converts natural-language tasks into exact shell commands using local man-page retrieval.
- Designed a hybrid retrieval pipeline combining BM25, embedding similarity, and reciprocal rank fusion over a SQLite-backed index of tools, flags, and examples.
- Implemented pluggable synthesis backends (llama.cpp, Ollama, and API providers) with install/update workflows and index staleness checks.
- **Tech Stack:** Python, SQLite, BM25, FastEmbed, NumPy, Ollama, llama.cpp

2026 **Wordsmith - Contextual Dictionary Generator**, *URL: `adper.me/wordsmith`*

- Engineered an AI-driven contextual dictionary and wordlist generator tailored for security professionals.
- Integrated multiple LLM providers (Groq, Gemini, OpenAI) to automatically extract relevant tokens from unstructured raw intelligence.
- **Tech Stack:** JavaScript/HTML/CSS, Multiple LLM APIs (Groq, Gemini, OpenAI)

2025 **OverPage - AI Webpage Analyzer**, *GitHub: `ADPer0705/OverPage`*

- Developed a Chrome extension designed to scrape active webpages and generate on-demand summaries via an integrated chat interface.
- Engineered a PHP backend to handle text preprocessing and forward client queries directly to the **Google Gemini API**, minimizing local resource consumption.
- **Tech Stack:** HTML/CSS/JavaScript (Chrome Extension), PHP, Google Gemini API

2025 **Praetor - Serverless AWS Security Automation**, *GitHub: `ADPer0705/praetor`*

- Engineered a serverless compliance auditing platform using **AWS Lambda and EventBridge** to perform 170+ daily security checks across 11 AWS services.
- Delivered zero-cost, enterprise-grade cloud security scanning through automated HTML dashboards and Slack integration for critical misconfigurations.
- **Tech Stack:** Python, AWS (Lambda, EventBridge, CloudTrail, SAM), Boto3

2025 **ADB Data Fetcher Utility**, *GitHub: `ADPer0705/ADB_Data_Fetcher`*

- Developed a Windows Form desktop application using **C# (.NET 8.0)** to automate the extraction of SMS, contacts, and logs from Android devices via ADB.
- Integrated Entity Framework Core with SQL Server to provide seamless persistence and management of device data.
- **Tech Stack:** C#, Windows Forms, Entity Framework Core, SQL Server, ADB

2025 **TeleDM - Telegram Download Manager**, *GitHub: `ADPer0705/TeleDM`*

- Developed a feature-rich desktop application enabling robust, interrupt-tolerant file downloads from Telegram without keeping the client active.
- Implemented a Tkinter GUI featuring queue management, progress tracking, auto-resume capabilities, and a SQLite database for persistent download history.
- **Tech Stack:** Python, Tkinter, SQLite, Telegram API

2024 **Inquiro - Local RAG System**, *GitHub: `CY-N4P5E/Inquiro`*

- Built a **RAG system** transforming documents into a queryable knowledge base using **LangChain** and **FAISS**.
- Implemented a local-first architecture with **local LLMs (Mistral)** via Ollama, along with Nomic Embed Text for high-quality semantic understanding and optimized memory management.
- **Tech Stack:** Python, LangChain, Ollama, FAISS, Nomic Embeddings

2024 **AIML CTF Challenges**, *GitHub: `ADPer0705/AIML_CTF`*

- Designed and developed original Capture-the-Flag (CTF) challenges focusing on AI/ML and Cryptography for the university club.
- Created scenarios including machine learning model bias detection and Python reverse engineering to train students on practical security implementations.
- **Tech Stack:** Python, Jupyter Notebook

Experience

May–July 2025 **Intern / Research Assistant**, *Department of Telecommunications, NFSU*, Gandhinagar

- Selected through a competitive university exam; the only student from my class and the youngest overall to qualify.
- Conducted research on the security posture of 5G architecture, with a focus on subscriber information security vulnerabilities.
- Developed a Retrieval-Augmented Generation (RAG) application, feeding it 5G technical specifications from 3GPP to enable an interactive query interface.
- Gained hands-on experience in cybersecurity research, technical documentation, and applied AI integration.

Jul 2024 **Cybersecurity Intern**, *Centre for Development of Advanced Computing (C-DAC), India*

- Completed an intensive training program on cybersecurity fundamentals.
- Executed hands-on labs in network security, digital forensics, and ethical hacking.
- Gained practical experience with tools like Wireshark, FTK Imager, and Metasploit.

Certifications

Mar 2026 Fortinet Certified Fundamentals Cybersecurity – Fortinet

Mar 2026 Technical Introduction to Cybersecurity 3.0 – Fortinet

Mar 2026 Introduction to the Threat Landscape 3.0 – Fortinet

Dec 2024 Certified in CC – $(ISC)^2$

Leadership & Activities

2024–Present Co-Founder / Tech Lead – AI/ML Club, National Forensic Sciences University

- Initiated the creation of the AI/ML Club and actively manage the DataCamp classroom for the university community.
- Played a key role as part of the tech team, organizing workshops, lectures, and hands-on sessions on AI implementation and its real-world applications.
- Designed and conducted a Capture-the-Flag (CTF) challenge, including creating original problems for participants.
- Delivered live demonstrations and interactive programming sessions, educating students on AI/ML project development.

Interests

Professional Cybersecurity, Artificial Intelligence & Machine Learning, Intelligent Security Systems, Linux Customization, Workflow Automation

Personal Tinkering with hardware/software, Gaming, Writing, Open-Source Contribution, Building towards a Stark-style personal workstation
